# See the BIG PICTURE with Canvus

Canvus advanced visualization software is changing the way the world works. We create solutions that allow agile teams to connect in real-time, share ideas and collaborate using live data.

Canvus enables organizations to solve some of the most pressing issues they face today, such as gaining the competitive advantage, getting to market faster, increasing productivity within teams, and delivering value through big data analytics and business intelligence.

Now there is a collaboration platform that can deliver on the promise of anywhere, anytime, any device collaboration.

KEY FEATURES

HARDWARE AGNOSTIC

Although there are many advantages to running MultiTaction software on MultiTaction hardware, our software is compatible with most touch screen displays and video walls that meet the minimum technical requirements, including any Windows compatible display.

BETTER TOGETHER

When you run Canvus on a MultiTaction display you gain access to features unique to MultiTaction including unlimited points of touch and Codice. Codice is based on MultiTaction's proprietary Enriched Reality technology. 2D codes can be printed on a wide range of objects and can turn anonymous public displays into personal two-way tools that benefit the user and the content owner.

WHERE'S YOUR DATA?

MultiTaction collaboration systems are location agnostic, and offer complete flexibility. Whether you data is on premises, in the cloud, or anything in between, we've got you covered.

WALK-UP INTERACTIVITY

No training necessary. If you can use a flip chart, you can use MultiTaction software. It's that easy.

MS OFFICE SUPPORT

Any office document can be opened and operated in the window as if working on a regular PC. Just like any other content, snapshots can be taken, annotated and shared.

PEN SUPPORT

You can draw or write on MultiTaction hardware using our IR pen; third party pens are also supported. When running MultiTaction software on third party hardware, pen support must be available, for this feature to function.

BYOD SUPPORT

Screen casting and remote touch capabilities mean that laptops, tablets and other smart devices can easily share content.

SCALABLE

Canvus provides a giant workspace that is easily scalable, which allows for very large amounts of data to be displayed simultaneously. This includes: images, videos, live feeds, browser sessions, remote PC connections or smart device inputs.

REAL-TIME COLLABORATION

Canvus makes it possible for teams to share and manipulate data with near-zero latency. Remote users can view, share, manipulate, draw and input data from their individual device. Whether your team members are in the same room, down the hall, in their home office, or around the world, imagine being able to work on video and data in real time.

SPLIT WORKSPACES

Each screen can be split into many workspaces. In each work space people can work independently on the same canvas or open a new canvas. This is particularly powerful if you want to create a flexible space for collaboration, such as using separate displays for breakout sessions.

RAPID IDEATION

The quick note function allows users to create a colored note that can either be filled with text from the virtual keyboard, hand writing from an IR pen, or drag & drop any other content from the canvas. All of these can be combined to enrich an idea captured in the note. Perfect for brain storming sessions.

VIDEOCONFERENCING CAPABILITIES

Engage agile team members with videoconferencing. Canvus can be integrated with any videoconferencing platform such as Zoom, BlueJeans, MS Teams and Webex.

RDP

Canvus has a built in RDP client, which can be used to connect to an RDP server. The smooth RDP integration allows you to run and update applications like MS Office, AutoCAD, Photoshop Paint, etc. as if they are running in Canvus.

API

Adding API to Canvus creates exciting new possibilities to integrate with other software platforms, such as videoconferencing applications, data applications and many more. This allows for more advanced development or customization of our software.

Bundle Canvus with Showcase for maximum engagement.
